My First knit Experience

James D. Wilson

November 9, 2016

This is **my** first knit experience. First, *I* will get R to print out **Hello World,** and I will get R to repeat to me my input command.

```
print("Hello World")
```

```
## [1] "Hello World"
```

Now, I'll do the same as above except I will tell R **not** to print out my input

```
## [1] "Hello World"
```

Finally, I will generate 1000 observations from a N(0,1) distribution and print the histogram of the data with 100 bins.

```
data <- rnorm(n = 1000, mean = 0, sd = 1)
hist(data, n = 100)
```
